

Miguel Ángel Bueno Rivera

SENIOR FULL STACK DEVELOPER / GAME DEVELOPER

I'm Miguel, a Computer Engineer based in Barcelona with 7+ years of experience building web applications. A Master's in AAA Game Programming from UPC still influences how I approach systems, performance, and craft.

I currently work as a Senior Full Stack Developer at Next Digital for Iberia Airlines, building POCs across AI, e-commerce, and cloud-based solutions. Throughout my career, I've been part of innovation and R&D teams, researching cutting-edge technologies, rapidly adapting to new tools, and helping integrate them across the wider team. I place a strong focus on quality, testability, and maintaining the highest engineering standards.

EXPERIENCE

Senior Full Stack Developer — Next Digital Hub, Madrid (Remote)

SEPTEMBER 2022 - PRESENT

Working within Iberia Airlines' Innovation Team, leading and contributing to greenfield proof-of-concept projects across AI, e-commerce and cloud solutions. Own the full delivery lifecycle, from requirements and technology selection to architecture, development, testing, deployment and monitoring, using Java, Kotlin, React and Angular, as well as Python and NestJS services with REST, GraphQL and Model Context Protocol (MCP) integrations.

- ChatGPT / Claude Apps (MCP servers)
- AI-powered chatbots
- E-commerce solutions
- Event-driven AWS-based applications
- Serverless AWS architectures
- Dashboard creation and application monitoring
- CMD applications with GO
- Infrastructure creation with Terraform (IaC)
- Mentor and onboard new team members, promoting clean code, testing best practices and engineering quality standards.

Focused on developing high-quality, thoroughly tested applications with clean and scalable architectures. Extensive experience across AWS cloud services — covering infrastructure, storage, and security aspects. Skilled in working with PostgreSQL and other relational databases, and experienced in CI/CD automation to ensure efficient, reliable, and maintainable delivery pipelines.

Full Stack Developer — NTT Data Europe & Latam, Barcelona

SEPTEMBER 2019 - JULY 2022

Developed and maintained customer-facing and internal insurance platforms for Allianz and Zurich using Java, Spring Boot, Angular and web technologies. Contributed to requirements analysis, technical design, effort estimation and task

Barcelona, Spain

SKILLS

Programming Languages

Java, C++, C#, Python, Go, JavaScript, TypeScript

Frontend Development

React, Angular

Backend Development

Spring Boot, Node.js, REST APIs, GraphQL, MCP servers, microservices

Software Architecture

Layered architecture, three-tier architecture, hexagonal architecture, microservices architecture, distributed systems, event-driven architectures

Persistence and Databases

JPA, MikroORM, Liquibase, PostgreSQL, MySQL, MongoDB

coordination within Scrum teams. Helped design and deliver a workflow-authoring tool and supported the evolution of customer portal applications.

Programmer — EUTI Software, Girona

FEBRUARY 2019 - JUNE 2019

Development of a multi-platform application made in Xamarin.Forms (C#), published for Android and iOS Smartphones. Maintenance of a server made in Visual Basic .net. Customer service troubleshooting.

EDUCATION

Master's degree in Advanced Programming for AAA Video games — Universitat Politècnica de Barcelona, Barcelona

OCTOBER 2020 - NOVEMBER 2021

Grade with distinction - 10/10.

Learned how to build a 3D Game Engine from scratch in C++, OpenGL and GLSL. Organized as a real company with Art students to build our own Engine and Videogame as a final project.

In the master's degree we learned about the foundations of video game engines and the creation process of a video game from start to finish. The final project was made as a team, and some of my work was:

- Development of a 3D game engine programmed in C++ and OpenGL.
[Engine repository](#).
 - Graphics: UI Shaders, Dissolve Shader (Simplex Noise Map), Chromatic Aberration, MSAA integration.
 - UI Components used in scenes: 2D Transform, Text, Image and others. · Navigation Module: integration of Recast & Detour libraries for the creation of NavMesh, NavAgent and NavObstacle.
- Development of a 3D video game in C++. [Game trailer](#) and [Full gameplay](#).
[Video game repository](#).
 - Scene creation and management: management of the different scenes of our video game; main menu, level 1, level 2, boss level, pause menu, death screen.
 - Gameplay: Final Boss bullet hell fully customizable (easy to change parameters to create additional new patterns), UI scripts and animations, scripts for simple behaviors.
- Other: gameplay team lead in last sprints; assisting the producers in the team organization and managing the developers of the gameplay team, general bugs solving.

Bachelor's degree in Computer Engineering — Universitat de Girona, Girona

SEPTEMBER 2014 - JULY 2019

Specialized in Software Engineering.

Cloud and Infrastructure

Infrastructure as Code,
Terraform

CI/CD and Version Control

Git, GitHub, Bitbucket, SVN,
Jenkins, GitHub Actions,
continuous integration and
delivery

Graphics Programming

OpenGL, GLSL

LANGUAGES

Spanish (Native)
Catalan (Native)
English (C level)

Boundead: as a final project, a colleague and I developed a 2.5D action/platform video game made in Unity (C#).

To check the gameplay, access the [Youtube Playlist](#) and check the source code [here](#). To play it yourself, [download the project](#).

PROJECTS

Learn more about all these projects on my [website](#).

PS5 Returnal — Bullet hell - C++ Unreal Engine 5

A project to recreate bosses from the third-person bullet-hell video game 'Returnal', developed by Housemarque for PS5. Programmed mainly in C++ and implementing enemy's behavior with Behavior Trees in order to learn more about industry standards.

Bullet Heaven — C++ Unreal Engine 5

Currently working in a Bullet Heaven top down shooter video game, made in Unreal Engine 5 and C++
